

This app stores the following user data on our servers:

- Nickname
- Photo (optional)
- Added books with their stickers

The purpose of this app is to share stickers bought or given by a shop, so you and your friends can help each other to collect all the stickers.

To do this, users can become friends within this app, so relationships between user accounts are also stored on the server. Relationships are only made when a user searches a friend and adds them to his account.

When a user searches for friends, nickname (optional) and photo (optional) are shown to be able to find each other. Once a friendship is confirmed, users can see each other's books to help to collect stickers

None of all the stored user data is used otherwise than just for users to be able to use the app or are sold or used by others.
